Everlast Vinyl Sheet Pile Bulkhead

Dear Mr. Hazenberg :

As the Engineers of Record for the above referenced project, R & W / Engineers, P.C. is pleased to report that the installation and performance of the Everlast Synthetic sheetpiling has met or exceeded expectations.

Approximately 2,200 linear feet of ESP 8.5 vinyl sheet pile bulkhead was used to replace an existing deteriorated timber seawall. The vinyl sheets were designed as a Navy Style bulkhead with timber face piles and horizontal timber framing to support retained heights up to 10 feet.

The installation of the sheeting was performed during the winter of 2010-2011, which included record snow falls in the Long Island region.

To date the vinyl sheets have performed as designed and R & W / Engineers, P.C. will continue to design and specify your sheets for future projects.

Very truly yours,

**R & W / Engineers, P.C.**
